

ALASKANS WANTED

THE FACTS:

- Next winter, ARCO Alaska plans to start up major new oil production facilities at the Kuparuk and Lisburne fields, and the world's largest gas plant at Prudhoe Bay.
- This investment will increase production capability by 10 percent. It will bring new income to the state of Alaska in royalties and taxes.
- ARCO will need 250 additional permanent employees to operate these complex new facilities.
- There may not be 250 qualified Alaskans available because we already have dipped deeply into the pool. ARCO hired 121 Alaskans for 126 new North Slope jobs last year, and 126 Alaskans for 129 new jobs in 1984.
- ARCO advertised in Alaskan newspapers in November and again in January to fill the new jobs. Qualified Alaskans will be given preference.
- We also are advertising elsewhere, to be sure we have 250 qualified people when we need them.
- Qualifications: At least two years of college math or technical training and five to ten years' oil field operating experience.
- Responsibilities: Awesome. A crew of only seven operates an industrial complex that processes up to 300,000 barrels of crude oil every day. An error could shut down an entire field.
- It's good business to hire Alaskans. Alaskans are here by choice, and it saves ARCO the cost of the move.
- If we must hire people from outside the state, they must be willing to move to Alaska. That has always been ARCO's policy.
- When ARCO starts up those new North Slope facilities, they will be run by Alaskans.

ARCO Alaska, Inc.

NORTH SLOPE OPPORTUNITIES

ARCO Alaska, Inc.'s North Slope operations can give you the opportunity to provide vital support to one of the 20th century's greatest ventures: developing/producing the continent's largest oil fields. Expansion of facilities at Prudhoe Bay and Kuparuk, located in the northernmost part of Alaska has increased the need for highly skilled operators and maintenance technicians. These challenging jobs offer a unique opportunity for the motivated individual to participate in the development of the oil producing area. The following will apply to all positions:

- Work schedule: 7 days on/7 days off, 12 hour shift
- Rotating day and night work schedule for some jobs
- Company provided room and board at work
- Company paid relocation
- Company transportation provided from Anchorage to the North Slope (Prudhoe Bay/Kuparuk)
- Placement subject to pre-employment physical examination and clearance

AUTOMATION TECHNICIAN

Installation and maintenance of DCS and SCADA Systems. Maintenance of data communications networks, local area networks, network analysis equipment. Other responsibilities include ability to train other technicians on DCS maintenance using OJT methods. May be required to cross-train in microwave, radio and computer-controlled peripherals, and microprocessor-based equipment.

INSTRUMENTATION TECHNICIAN

Responsible for calibrating, troubleshooting, maintaining, and repairing electronic, hydraulic, and pneumatic process control instrumentation, transmitters, controllers, transducers, and control valves. Should have experience on gas turbine controls and programmable logic control computers. Assist in other camp, drill site, and facility maintenance without close supervision.

TELECOMMUNICATIONS TECHNICIAN

Install and maintain communications equipment to component VHF, UHF, microwave, frequency and time division multiplex equipment, radio equipment, ground-to-air and navigational systems, radio telephone switching equipment, electronic key systems, base antenna and tower equipment, TYRO and cable TV systems.

DRILL SITE OPERATOR

Responsible for safe and efficient operation of the drill site, and control wells. Work in close relationship with flow station operator, maintenance and work in close relationship with personnel.

GENERAL MAINTENANCE TECHNICIAN

Requires a good working knowledge of pipelining, welding, metal, painting and coating applications, pipe insulation, vibration data gathering and analysis equipment, digital vibration data gathering and analysis equipment, digital vibration data gathering and analysis equipment, digital vibration data gathering and analysis equipment.

VIBRATION TECHNICIAN

Troubleshoot, repair, and calibrate vibration monitoring equipment. Experience on oscilloscopes, analyzers, digital vibration data gathering and analysis equipment, digital vibration data gathering and analysis equipment.

OPERATOR I

Responsible for safe and efficient operation of one separation and treatment, gas conditioning and power generator and utilities, or seawater treatment plant. Responsibility for all aspects of the unit operation, operation, and maintenance work coordination.

ELECTRICIAN

Troubleshooting and repair of various electrical systems and plans heating and ventilation equipment. Requires electrical school required. Working knowledge of electrical code and ability to read prints is required.

MECHANIC

Requires troubleshooting and repair of mechanical systems and plans heating and ventilation equipment. Requires mechanical school required. Working knowledge of mechanical code and ability to read prints is required.

FLOW MEASUREMENT TECHNICIAN

Installation and maintenance of flow measurement equipment. Requires differential pressure, positive displacement, and ultrasonic flow measurement devices within industry standards. Ability to perform reverse indication alignment and calibration of digital and microprocessor-based products. Input/output data systems.

QUALIFICATIONS

All of the above positions require a minimum high school education or equivalent, 3 to 5 years' experience in the applicable skill. Completion of recognized apprenticeship/technical school desired. Applicants must be physically able to climb ladders and stairs. Some positions include work outside in an arctic environment. Valid drivers license required.
