

Energy Crisis Solution

FBI Skate After Pogo Stick Escapees?

By MARILYN RICHARDS

Environmental Reporter

Besides the looming threat of gas rationing, thinking about this so-called energy crisis conjures up how survival in everyday life might be.

Luxuries such as drive-in movies and hamburger joints have already suffered but popular television serials are next to feel the pinch.

Imagine how the cop shows might turn out. Could you see the F.B.I. roller skating after the bad guys who are escaping on pogo sticks and making off with the loot? They couldn't afford to drive those big black cars and

vans anymore. Ironside would be riding around in a rickshaw pulled by his trusty aides.

Game show prizes would be tons of coal or gallons of gas instead of vacation trips or lawn mowers or cars.

Many people have been laid off work by the energy crisis. Some people who used to work in gas stations or in automobile factories might find new jobs if they make the best out of the worst and follow several obvious solutions.

The first solution is just have the ill and disabled use the elevators. The unemployed gas station attendants or former assembly line workers could be employed on elevator mobilization units. Attaching a long rope to the top of the elevator and pulling it up by hand would save a lot of fuel and great arm exercise. This method is similar to the slave oarsmen in the days of ancient Rome.

The United States could send their elevator mobilization units to compete in weight lifting at the Olympics. Healthy people could have special passes to use on elevators if their destination is higher than the tenth floor.

The second solution would be to bring back the dog teams. Wind mills to harness the wind for energy production is another solution. Even this story was typed on a manual machine.
