

Future oil development could help stabilize energy costs.

It takes cooperation.

In western Alaskan communities, energy costs are one of the major demands on the monthly family income.

But research commissioned by the State of Alaska indicates that future oil production in these areas could help stabilize energy costs.

Communities, like Barrow, with access to natural gas from nearby fields, have heating costs less than half those of other North Slope villages.

Other communities can follow the Barrow example, and tap nearby oil fields and help stabilize their energy costs.

But it will take cooperation between the villages, the native corporations and oil companies, like Chevron, to make it all possible.

And we at Chevron are willing to work together to make it happen.

There's nearly 100 years of Alaska behind every Chevron sign.
