

The *Tundra Times* had hoped to get photographs of the 1995 Statewide Native Youth Olympics in this edition, however, the film was destroyed at the Carr's developing center. We apologize.

Also, we misdesignated Sports Editor Paul Tony as Aleut. He is a Yupik Eskimo.

Young People are the Future of Our Communities

Gas Sniffing: Is a Young Person You Know in Danger?

The future of our communities is being threatened — by the growing number of young people sniffing gasoline, glue and other substances. Sniffing creates a dangerous high — a high that can cause serious risks, such as brain damage, loss of sight and even death. Many children will never recover from the permanent effects of sniffing chemicals.

Help young people realize the promise of their future by stopping sniffing in our communities. For more information on how to help children who may be in danger, call Charter North Hospital. **We can help.**
