Over 5,000 Tasters of this product at the Fur Rendezvous Trade Fair said, "It's Delicious!"

We know you'll like it too. Compare our prices and place your order while current supplies last.

BUT WHAT REALLY IS MEADOW FRESH? About 75% of this product is derived from milk. The milk derived contents are whey, sodium caseinate and non-fat dry milk. The only other major ingredients are natural corn syrup solids and natural fats from vegetable sources. MEADOW FRESH is low in both fat and cholesterol.

*Sweet dairy whey comes from the cheese making process. Essentially all of the carbohydrates, trace minerals and 20% of the protein found in milk are retained in the whey. Therefore, whey is a good nutritional product.

Now, due to a new formulation, whey has been combined with other ingredients to form MEADOW FRESH, a delicious, nutritious, new and exciting product. MEADOW FRESH, as an Imitation Low Fat Dry Milk, is now becoming established and accepted in and of its own right. The most frequent comment is that, while the flavor and nutrient value of MEADOW FRESH are not exactly the same as milk, MEADOW FRESH sure is good, and many like it better.

All ingredients used in MEADOW FRESH are on the G.R.A.S. (Generally Recognized As Safe) list compiled by the U.S. Food and Drug Administration.

The foregoing table is for comparative purposes only.

This table does not mean that Meadow Fresh is the same as cow's milk or human milk. Cow's milk or Meadow Fresh should not be given to infants under 12 months as a substitute for mother's milk or baby's formula without a doctor's recommendation.
