N D MINFRS

SUCTION DREDGES are being used more and more often for locating placer gold deposits. They are portable efficient and relatively easy to operate.

With careful use a suction dredge does little damage to the environment. But great care must be taken to avoid any stream where salmon might have spawned. Even the most careful operator will find it almost impossible to avoid disturbing the eggs which are another important resource for Alaska.

For more information contact your Department of Fish and Game/333 Raspberry/Anchorag 99502/344-0541.
