Needles—Straight D.P.  
and Circular  
Pattern Books  
SPECIAL ORDERS INVITED

425 3rd in Graehl  
Fairbanks, Alaska

## CANNED SALMON'S QUALITY CONTROL WORKS FOR YOU

From the moment the fighting salmon enters the fishermen's net until the final product reaches your grocer's shelf, Alaska's canned salmon industry is working to maintain the high quality of its product. Canned Salmon is the only major food industry in the nation providing its own quality control—insuring a top product and continued sales. ■ Every year, more than 175,000 cans of salmon are drawn at random from the pack and inspected by Northwest Research Laboratory to guarantee compliance with the requirements of the Food and Drug Administration. ■ Part of the National Cannery Association control program is the Annual

Canned Salmon Cutting Demonstration. Nearly 200 judges from within the industry examine hundreds of unlabeled, unidentified samples to determine the average quality of the previous year's pack. Thus, the packers are able to prepare the best possible technical program for the coming season and maintain the high quality they have established. ■ This quality control program is the prime concern of every resident of Alaska because the catching, processing and sale of canned salmon contributes more to the economy of Alaska than any other industry. ■ By providing the high quality demanded by Mrs. Housewife, the industry is working for Alaska and for you!
