

Natural resource reports available

**The Alaska Division of Geo-
logical & Geophysical Surveys**

announced availability of new reports covering topics from ground water in Eagle River to surficial geology on the North Slope and a variety of previously unavailable information to the public.

Surficial geology of the Arctic Coastal Plain from the Colville Delta to the Hulahula River was studied through air-photo interpretation and field mapping during the 1980s.

A complete list of reports in the spring quarterly release is available from Alaska Division of Geological and Geophysical Surveys, 794 University Avenue, Suite 200, Fairbanks, Alaska 99709-3645. Reports can also be inspected at most Alaska libraries.
