

31 Families in Barrow are Living in houses Supplied by Toombs in 1966

These houses were designed especially for native housing for remote areas of Alaska, taking into consideration Alaska's climatic conditions. Each house has been approved by the Farmers' Home Administration.

These houses can be purchased with all the components necessary to have a complete house -- or any portion the purchaser requests.

The components are packaged to conform with the type of transportation used.

Houses Designed for Alaska Villages

These houses are designed and built by the Briggs Manufacturing Company of Tacoma, Washington. The construction is particularly adapted to Arctic climate.

Twenty-two complete Briggs homes were erected in Barrow, Alaska during last year by the local residents and 9 Briggs additions were added to Barrow dwellings.

Orders are being taken NOW in the Barrow area so that the house packages will be ready for shipment on the North Star in midsummer.

All house packages are sold by components so that the owner may buy only those components which fit the particular need.

Items such as stoves, furnaces, refrigerators, and hot water heaters may be gas, oil, or electrically operated.

All of the Briggs houses are well insulated throughout the walls, ceiling and floors,

These houses have been designed to sit on piling thus cutting down building costs - and makes the house adaptable to almost any part of Alaska.

In order to receive summer delivery of houses, or additions, orders should be placed in the near future.
